**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasaki et al (EP 1341038 or 7,108,951; column and line citations are for the EP document).

Sasaki et al disclose a photosensitive resin comprising and a photoacid generator. The resin may comprise a variety of specific types of monomers, including those meeting the structural limitations of the instant formulas I-1 and I-2 ([0095], F-29 to F-33, F-35 to F-38); B-5-B-15; pages 36 and 37). Such monomers may be employed in combination, and I-1 in the claimed amount as in one of the many inventive samples, j-29. The composition also comprises a solvent, surfactant, and diffusion inhibitor ([0191]-[0200]).

Given the teachings of the reference, it would have been obvious to one of ordinary skill of the art to prepare the material of Sasaki et al choosing to employ the monomers described above in combination and/or in the amounts as instantly claimed.

***Response to Arguments***

3. Applicant's arguments filed 5/27/08 have been fully considered but they are not persuasive. Applicant has argued that the Sasaki reference fails to meet the limitations of the newly amended claims as the exemplified polymer cited by the examiner comprises a monomer having an aromatic ring. The examiner respectfully disagrees. The Sasaki reference teaches that

among the list of suitable monomers, those having aromatic rings are included but not required. It would have been obvious to one of ordinary skill in the art to prepare the material of the reference, or even the cited polymer and replace the aromatic ring-containing monomer with another monomer taught to be useful in the polymer of the invention.

***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
